

Supplementary Figure 7. Gating strategy for the analysis of spenocyte intracellular cytokines. CD4<sup>+</sup> T cells and CD8<sup>+</sup> T cells were defined following the gating strategy above. IL-17A and IFN $\gamma$  were quantified as frequency of parent (CD4<sup>+</sup> or CD8<sup>+</sup>), and results normalized to healthy controls. IL-10 was quantified as mean fluorescence intensity (MFI), and results normalized to healthy controls.
